

MUHAMMAD FURQAN ARSHAD

Full-Stack / Backend Developer

Multan, Pakistan | +92 336 7755208 | arshadfurqan031@gmail.com

[linkedin.com/in/furqan-arshad-3255ba245](https://www.linkedin.com/in/furqan-arshad-3255ba245) | github.com/DevFurqanAI | furqanarshad.vercel.app

REST API Design & Development • Node.js • Express.js • React • MongoDB • SQL Server • C# • ASP.NET • Authentication & Authorization • Database Design & Normalization • Object-Oriented Programming • Git/GitHub

SUMMARY

Full-stack developer who builds systems, not just interfaces — production web apps with real authentication and moderation, and desktop/backend tools backed by properly normalized, business-rule-enforcing databases. Computer Science undergraduate at Air University seeking a Full-Stack or Backend Development Internship to bring that same care for what's underneath the API call to a production team.

TECHNICAL SKILLS

Backend & APIs: Node.js, Express.js, REST API Design & Development, C#, ASP.NET, Authentication & Authorization, CRUD Operations, Object-Oriented Programming (OOP)

Databases: SQL Server, MongoDB, Mongoose, Database Design & Normalization, Stored Procedures & Triggers, Query Optimization

Frontend: React, Vite, Tailwind CSS, Bootstrap, JavaScript, HTML/CSS, WPF, Windows Forms

Tools & Practices: Git, GitHub, Version Control, Visual Studio, SQL Server Management Studio (SSMS), Data Structures & Algorithms, Problem Solving & Debugging

EDUCATION

Bachelor of Science in Computer Science

2024 – 2028

Air University, Multan, Pakistan | CGPA: 3.38 / 4.00

- Relevant Coursework: Data Structures, Database Systems, Full Stack Web Development, Information Security
- Focus Areas: Backend Development, Database Design, Full-Stack Development

PROJECTS

Affinity Hub — Full-Stack Social Media Platform

2026

Live in production | MongoDB, Express.js, React, Node.js, Cloudinary | affinity-hub-liart.vercel.app

- Layered signup with Google OAuth, email OTP, and Cloudflare Turnstile after an early version let spam accounts straight into the feed — closing a real abuse vector, not just checking an auth box
- Built role-based, auditable moderation (reports, bans, suspensions) so admin actions are reversible instead of a blunt delete button
- Designed Mongoose schemas around read-heavy feed access patterns, since posts, likes, and comments are read far more often than written
- Routed media through Cloudinary so the API layer never touches raw uploads directly; deployed frontend (Vercel) and backend (Render) independently so each layer scales on its own

Real Estate Management System

2025

Coursework — Team Project | C#, WPF, ASP.NET, SQL Server

- Modeled plots, projects, and customers as a normalized, foreign-key-linked schema before building any UI, avoiding costly rework across two client apps
- Built one authenticated CRUD data layer consumed by both a WPF desktop client and an ASP.NET web client
- Structured interfaces to stay in sync with backend validation rather than duplicating rules client-side

Flight Management System

2025

Coursework — Database Systems | C#, Windows Forms, SQL Server

- Enforced business rules (seat limits, role restrictions) via SQL Server triggers and constraints so invalid data couldn't get in, even from a buggy client
- Split Admin and Employee capabilities via role-based authentication at the query level
- Ran a query optimization pass after the initial schema made common lookups too slow

Search Engine Auto-Complete & Web Crawler Simulator

2025

Coursework — Data Structures | C++, AVL Tree, Trie, Heap

- Built a BFS-crawled, AVL-indexed keyword store with Trie-based prefix search and max-heap relevance ranking — backend data-structure fundamentals applied to a real retrieval problem

EXPERIENCE

Software Development — Academic Projects

09/2024 – Present

Air University, Multan

- Designed and built database-driven applications using C#, ASP.NET, and SQL Server
- Developed backend logic with stored procedures, triggers, and relational schema design
- Collaborated in team-based academic projects, applying software engineering principles to build scalable, maintainable systems

Head of Community Administration

07/2021 – 09/2024

Discord Communities — Remote

- Led moderation and daily operations for two online communities totaling 2,800+ members, managing engagement strategy and conflict resolution
- Redesigned onboarding and dispute-resolution workflows, improving member retention and reducing escalated conflicts requiring direct intervention
